Summary

Third-year Information Systems Engineering undergraduate seeking a Trainee Business Analyst / Project Manager role with hands-on experience in business analysis and Agile project delivery across client-facing healthcare and independent software projects. Served as Product Owner and team leader for 6-member Agile Scrum teams — eliciting and documenting requirements (BRD / SRS), prioritising backlogs, developing project plans and timelines, allocating resources, managing risks, and coordinating stakeholders through User Acceptance Testing. Technical foundation in SQL, Power BI, Python and system design; experienced with JIRA, Trello and GitHub. Strong analytical focus and applied informatics experience to drive data-informed decisions and project delivery.

Project

Aug 2026 – Sep 2026

RentLens – Smart Rental Decision & Tenant Risk Analysis Platform

- Authored a Business Requirements Document (BRD) and Software Requirements Specification (SRS) covering 8 functional modules, non-functional requirements and business rules; used them to scope the product and develop the project delivery timeline.
- Prioritised requirements using MoSCoW and defined 10 user stories with acceptance criteria across 3 user groups: Tenants, Landlords, and Administrators.
- Built a Requirements Traceability Matrix (RTM) linking user stories and acceptance criteria to system modules to track scope coverage and validation.
- Planned the data model and technical scope for property comparison, budget-based recommendations, complaint analytics, and market reporting to support development and reporting requirements.

Jun 2026 – Jul 2026

LankaThread – Online Fashion Store E-Commerce Platform

- Elicited and documented functional and non-functional requirements through 12 user stories covering Customer and Admin roles, including cash-on-delivery and WhatsApp support.
- Mapped order placement, payment processing, and delivery workflows using BPMN swimlanes and decision gateways to define process boundaries and business rules ahead of development.
- Modelled 5 UML diagrams (Use Case, Class, Sequence, State, Component) to translate requirements into system behaviour and plan development milestones.
- Coordinated the design-to-development handoff, translating high-fidelity Figma wireframes into a MySQL data model to inform development and test cases.

Apr 2026 – May 2026

LibraryHub – Online Library Management System

- Planned and delivered 3 core library workflows (issue/return, reservations, inventory) end-to-end as an individual project, defining scope and acceptance criteria.
- Defined role-based access requirements for 4 user groups, aligning project scope with university library operations and security requirements.
- Built a KPI dashboard tracking 4 operational metrics to support ongoing performance monitoring and inform continuous improvements.

Jan 2026 – Apr 2026

Prime Medical – Doctor Appointment & Patient Management System

- Conducted stakeholder interviews to elicit business requirements and define project scope for appointments, consultations, prescriptions, pharmacy, and billing operations.
- Owned the product backlog, converting stakeholder needs into user stories and prioritising 6 epics across a 14-week Agile Scrum delivery cycle.
- Specified acceptance criteria across 6 core areas and coordinated User Acceptance Testing (UAT) with the client, feeding results into subsequent sprint planning and defect triage.
- Proposed and drove process improvements to reduce manual paperwork and prevent double-booking, aligning the plan with the development team and implementation timeline.

Jan 2026 – Jan 2026

Global Superstore Sales Analysis & Dashboard

- Analysed a retail dataset of 50,000+ records using Python (Pandas) and Excel to identify sales, profit, and margin patterns and inform planning decisions.
- Designed interactive Power BI dashboards with KPI cards and filters to support data-driven decision-making and performance monitoring.

Jul 2025 – Oct 2025

Lanka Health Insurance – Health Insurance Management System

- Led a 6-member team through a full 14-week Agile Scrum project, planning sprints, allocating tasks and resources, and tracking progress against milestones and deliverables.
- Elicited and analysed requirements for 6 system components, translating business needs into functional requirements and a structured project scope and timeline.
- Identified project risks and dependencies across insurance claims, policy management, and access-control workflows, implementing corrective actions (rescheduling and reprioritising sprints) to stay on schedule.
- Created 5 UML models (Use Case, Class, Sequence, Activity, ER) to document requirements and support planning and design decisions.
- Facilitated requirements validation and backlog prioritisation, preparing status reports and presenting sprint progress to the team and faculty supervisor.

Education

Sri Lanka Institute of Information Technology (SLIIT)
Information Systems Engineering | BSc (Hons)

GPA: 3.11/4.0

Oct 2024

Certificates

IBM Business Analyst Professional Certificate

Coursera

IBM Data Analyst Professional Certificate

Coursera

Skills

Business Analysis

Requirements Elicitation, Requirements Analysis & Documentation (BRD/SRS),

Functional & Non-Functional Requirements, Stakeholder Management, Business Process Analysis, Data Analysis, Gap Analysis

Project Management

Sprint Planning, Backlog Management, Agile Scrum, Kanban, Waterfall & SDLC, Scope, Timeline & Milestone Tracking, Risk Identification & Mitigation, Resource Allocation, Change Management, MoSCoW Prioritisation

Requirements & Modelling

User Stories, Acceptance Criteria, Use Case Modelling, BPMN, UML, Wireframing, Requirements Traceability Matrix (RTM)

Leadership & Coordination

Team Leadership, Cross-Functional Coordination, Meeting Facilitation, Status Reporting, Client Communication, UAT Coordination

Data & Technical

SQL, Power BI, Excel, Python, Pandas, Java, Spring Boot, MySQL, REST APIs, Git

Tools

Jira, Trello, Confluence, Figma, Lucidchart, Draw.io, GitHub, Microsoft Office, Word, PowerPoint

Professional Skills

Verbal & Written Communication, Problem-Solving, Analytical Thinking, Time Management, Teamwork
