

- IE3151: Information Systems Project Management
 - IE3121: Enterprise Architecture
 - IE3101: Enterprise Network and Information System Security
-
- Year 03 Semester 01
 - 2026

Assignment Title	Enterprise Digital Transformation Consultancy Project
Learning outcomes covered IE3151	• LO1: Explain core project management concepts, terminologies, and life cycle stages. • LO2: Apply financial evaluation techniques, estimation tools, and risk assessment methods to support decision-making in project initiation and planning. • LO3: Analyze key project management principles, performance domains, and stakeholder engagement strategies to enhance project success. • LO4: Evaluate industry's best practices, project management software, and case study insights to address real-world challenges in project execution and performance measurement. • LO5: Assess emerging trends to enhance adaptability and continuous improvement in project management.
Learning outcomes covered IE3121	• LO1: Apply a framework to determine the value and benefits of investing in Enterprise Architecture for an organization by following appropriate project management and change management processes for EA implementation. • LO2: Use the most effective implementation strategy and framework for real-world EA implementation. • LO3: Assess the role of EA in ensuring business continuity and disaster recovery plans, minimizing disruptions and mitigating risks. • LO4: Analyze the ethical and sustainability considerations associated with EA implementation and propose responsible practices for long-term viability. • LO5: Assess the Enterprise Architecture marketplace dynamics.
Learning outcomes covered IE3101	• LO1: Classify Network Infrastructure Security Access Control and their relevance across network layers • LO2: Describing risks to computer systems and various attack strategies • LO3: Analyze network security monitoring practices and incident response procedures

Assignment Mode	Report Submission, presentation, Viva
Maximum Marks	• IE3151: ISPM - 100 • IE3121: EA - 100 • IE3101: ENISS - 100
Contribution to the Final Grade	• IE3151: ISPM - 40% • IE3121: EA - 20% • IE3101: ENISS – 20%
Date published	17 th July 2026
Deadline for submissions IE3151	• Group Registration Deadline – 22nd July 2026 • Project Topic Finalization – 25th July 2026 • Evaluations will commence from the 3rd Week onwards.
Mode of Submission	Pdf

Assignment Description

Background

Modern organizations rarely undertake software development projects in isolation. Instead, software initiatives are driven by strategic business objectives, organizational transformation, enterprise-wide integration, and structured project management practices. Consequently, graduates entering the Information Systems Engineering profession are expected to possess competencies that extend beyond software development, including business analysis, enterprise architecture, project governance, stakeholder engagement, and digital transformation planning.

The **Enterprise Architecture (IE3121), Information Systems Project Management (IE3151), and Enterprise Network and Information System Security (IE3101) modules** collectively provide students with the knowledge and practical skills required to analyze business problems, design enterprise solutions, manage digital transformation initiatives, and address network infrastructure and security requirements. While each module addresses different aspects of enterprise systems, both contribute to a common goal: delivering sustainable business value through effective planning, governance, architecture, project execution, and application security.

This integrated assessment has therefore been designed to provide students with authentic industry experience by simulating a professional consulting engagement.

Assessment Philosophy

The assessment adopts the principles of Authentic Learning, Project-Based Learning (PBL), and Outcome-Based Education (OBE).

Rather than assessing Enterprise Architecture, Project Management, Networking, and Security requirements independently, students complete a single integrated consultancy project that requires them to apply concepts from all disciplines while producing a working software solution.

Students will assume the role of an Enterprise Consulting Team appointed by a client organization to plan and manage a digital transformation initiative.

Group Formation

- Form a group of 4 members within your respective batch/subgroup. (Weekday/ Weekend separately)
- Once formed and registered using the following form, you are not allowed to change the group members after the registration.

[Year 3 Semester 1 Assignment Group Registration – Fill out the form](#)

Project Identification

- You are required to find a real client.
- Properly gather the requirements from the client, and if any permission letter is required, please request it through the following form.

[Request Form for Data Collection Authorization Letter - Y3S1 – Fill out the form](#)

Project Deliverables

The consultancy engagement shall produce

Information Systems Project Management – IE3151

- Project Charter
 - Business needs
 - Project deliverables
 - Constraints
 - Project scope
- Project Proposal
 - Abstract
 - Problem specification

- Business idea
- Stakeholder Identification
- Executive Summary
- Project Initiation (NPV, ROI, Payback, Weighted Scoring, EMV)
- Project Planning (Estimation tools & techniques)
- Epics
- User Stories
- Key benefits
- General objectives
- Specific objectives
- Project plan (WBS/ Gantt Chart)
- Definition of Done (DoD)
- Budget
- Sprint 1 Preview
- Final Report
 - Introduction
 - Execution, Monitoring & Control, and Closure
 - Project Performance Domains Analysis (Stakeholders, Team, Development approach & lifecycle, Planning, Project work, Delivery, Measurement, Uncertainty)
 - Application of PM Principles (12 principles)
 - Lessons Learned
 - Future Work
 - References
 - Appendices

Enterprise Architecture (IE3121)

- Business architecture assessment report
 - The report should include Organization Profile, Business Problem Statement, Stakeholder Analysis, Business Capability Assessment, Current Business Architecture (As-Is), Future Business Architecture (To-Be) proposed by you, Business Value Analysis supported by appropriate diagrammatic representations provided in class.
- Information architecture proposal report
 - The report should include the current Information Landscape, Conceptual Data Model represented using case diagrams, class diagrams representing the process flow, Data Integration proposed, and Future Information Architecture supported by appropriate diagrammatic representations provided in class.
- Application architecture requirements report
 - The report should include Current Applications used in the organization, Application Portfolio, Application Problems, Epics, Proposed Application Architecture, and Technology Dependencies supported by appropriate diagrammatic representations provided in class.
- Technology architecture requirements report
 - The report should include Existing Infrastructure, Technology Assessment, Network Architecture, Infrastructure Requirements, and Future Technology Architecture, supported by appropriate diagrammatic representations provided in class.

Enterprise Network and Information System Security (IE3101)

- Vulnerability Assessment Report
 - Weak information security controls of the client
 - Data governance and compliance issues
 - Recommendations for security, IT governance, and infrastructure enhancement.

Software Product

- There must be a minimum of 4 significant Epics such that each member will be responsible for at least one Epic.

- All identified epics must be fully implemented in the Minimum Viable Product (MVP).

8. Assessment Timeline

According to the module, the submission links and templates will be uploaded to the respective module pages.

Week	Assignment Activity
Week 01	Group registration and topic identification
Week 02	
Week 03	
Week 04	Sprint 0 report submission
Week 05	
Week 06	
Week 07	Sprint 1 evaluation
Week 08	
Week 09	
Week 10	Sprint 2 evaluation
Week 11	
Week 12	Final report submission
Week 13	Sprint 3 Evaluation - final
